🎓 Learning Outcomes

After completion, BOTH will know:

- Data preprocessing & feature engineering
- Multiple ML algorithms (6+ models each)
- **Neural Networks (LSTM & GRU)**
- **Time Series Forecasting (ARIMA & SARIMA)**
- Model evaluation & validation
- Visualization & dashboard creation
- Real-world financial ML applications

Combined team knowledge:

- Complete ML spectrum: Traditional ML + Deep Learning
- Full time series toolkit: Classical + Neural approaches
- Complete portfolio system
- Research-grade implementation
- Industry-relevant skills

Recommendation

Start with **Phase 1A together** (2 days), then split into parallel tracks. Weekly sync meetings to share learnings and integrate components!

Both persons get:

-
- Improve Explain (ARIMA vs SARIMA)
- Traditional ML algorithms
- Equal, high-quality ML learning! 🚀
